Coursera

2025

Summary

- Aspiring Cybersecurity Specialist and Python/SQL Developer passionate about securing web applications and analyzing potential threats. Proficient in identifying web vulnerabilities using OWASP standards and committed to developing robust, secure solutions. Eager to learn and contribute to security-focused projects.

Experience

● **The Red Users**

Cybersecurity Intern

Remote

April 2025 to May 2025

- Configured firewalls and secured a virtual lab, using Wireshark to monitor traffic and improve threat detection.
- Assessed a WebGoat prototype with OWASP ZAP to find and exploit SQLi, XSS, and CSRF flaws, then documented and recommended fixes.
- Managed The Red Users' LinkedIn by sharing security posts and engaging with followers to boost company visibility.

 <https://theredusers.tech/>

● **Shadowfox**

Cybersecurity Intern

Remote

May 2025 to Present

- Performed Nmap port scans, DirBuster directory brute-forcing, and Wireshark packet captures to map out web application interfaces and extract plaintext credentials.
- Decrypted a Veracrypt container, reverse-engineered its executable entry point, deployed a Metasploit reverse shell on Windows 10, and executed a Wi-Fi deauthentication attack to capture and crack a WPA handshake.
- Completed a TryHackMe room (e.g., "Panda" or "Basic Pentesting") to gain root access, document the entire penetration testing workflow, and recommend remediation steps in a final report.
